

Highly Sprung in Year 4 – One Giant Leap

During Spring Term, we worked with AJ from Highly Sprung on their One Giant Leap project.

Over the course of 4 weeks, we had the opportunity to deepen our understanding of the world around us. We learnt all about how scientists believe the world began, animals, living things, habitats and classification.

"It was so much fun to show the evolution of man. I enjoyed being an ape!"

Jake Wallis

"Working with AJ was lots of fun. I enjoyed creating animal habitats with our bodies." Loren Witton

Working with AJ to learn more about how our world began and where humans and animals came from was so much fun!

We enjoyed learning about 'The Big Bang' in week 1, animal and human classification in week 2 and evolution and habitats in week 3. In week four, we applied our learning to create a performance to show at Coventry Transport Museum with lots of other schools. We had to show dedication, resilience and reciprocity in order to create our performance and work well as a team.

In the final week we visited the museum in Coventry to learn all about how transport has evolved over the years which we all really enjoyed. At the museum, we rehearsed and performed what we had been practising to an audience of children from other schools and parents. We performed amazingly and had such a wonderful day.

We love working with Highly Sprung and always feel very grateful that we have such a wonderful opportunity to take part in such amazing events with children from other places.

"Performing was my favourite part. Showing off what we had been practising to lots of people was scary but we did it!" Eva Pinches.
